

Optomap Retinal Scan & Optical Coherence Tomography (OCT)

Optomap Retinal Scan & Optical Coherence Tomography (OCT)

Patient First Name:

Patient Last Name:

DOB:

Optomap & Optical coherence tomography (OCT) are non-invasive tools that take pictures of the back of your eye. The OCT functions like an ultrasound, but uses light waves instead of sound to map the shape of your retina and optic nerve. The Optomap scan gives a panoramic high-quality digital image of your retina. It can potentially replace the need for dilation in some patients and provides a permanent record for annual review. Your doctor highly recommends these additional tests to aid in the diagnosis and management of various eye problems including:

Macular degeneration, glaucoma, diabetes and other pathologies of the eye.

If during the exam, your physician finds one or more of the above mentioned conditions, it may be covered by your insurance.

This screening is NOT covered by your insurance and the cost is as follows:

- ☐ Optos Retinal Scan: \$39
- ☐ Optos Retinal Scan & OCT: \$50

PLEASE CIRCLE your selection to enhance your eye exam with the latest technology in eye care. We want to ensure we are offering the most up to date options available.
